

Linde Forklift Parts

Linde Material Handling is one of the largest manufacturing companies on the planet focused in forklifts and warehouse equipment. For over 5 decades, the firm has been raising the bar for industrial trucks, high performance material flow solutions, driver assistance systems and fleet management. Linde has invented a unique set of equipment designed to take care of individual buyer requests.

As one of the global leaders in manufacturing warehouse equipment and forklifts, the business works in Europe under the Linde and Fenwick brands. Joining the KION Group in 2006, Linde is among one of the leading suppliers for Intralogistics by providing automation solutions. The KION Group is additionally the 2nd largest manufacturer of industrial trucks across the globe.

Operating in over one hundred countries around the globe with its' own branches, Linde is widely respected within the industry. There are assembly and production departments in China, Germany, the Czech Republic, France and the USA, along with over 700 service and sales retailers. The company's fleet is impressive. There are approximately 80 series with roughly 9000 equipment options and up to 20 model variants. Linde builds the fleet and their vehicles specifically customized to their clients demands.

Linde also makes high-performance options for intralogistics with warehouse equipment, diesel and electric forklift trucks, automation solutions, fleet management solutions, financing options and driver assistance systems. The company offers thorough operator certification and forklift truck services.

There have been great improvements in automation, digital networking and the demand for more specific products across numerous industries; contributing factors that are driving technological advancement within the intralogistics realm. Linde Material Handling strives to help its' end users meet and exceed their material management issues. Customer satisfaction is very important at Linde. In fact, there is no product considered off the shelf. The company only implements technological innovations if they offer its' customers with a sustainable benefit.
